Cat. No. PME101400

## **PRODUCT INFORMATION**

PLA2R1 **Target** 

**Synonyms** CLEC13C;PLA2-R;PLA2G1R;PLA2IR;PLA2R

Recombinant Human PLA2R1(21-164) Protein **Description** 

with C-terminal human Fc tag

**Delivery** In Stock **Uniprot ID** Q13018 **Expression Host HEK293** 

Tag C-Human Fc Tag

Molecular

**Molecular Weight** 

Reconstitution

**Background** 

PLA2R1(Glu21-Lys164) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

42.2 kDa after removal of the signal peptide. The apparent molecular mass of PLA2R1(21-164)-hFc is approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene represents a phospholipase A2 receptor. The encoded protein likely exists as both a transmembrane form and a soluble form. The transmembrane receptor may play a role in clearance of phospholipase A2, thereby inhibiting its action. Polymorphisms at this locus have been associated with susceptibility to idiopathic membranous nephropathy. Alternatively spliced

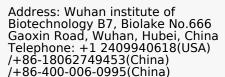

transcript variants encoding different isoforms have been identified.[provided by RefSeq, Sep

2010]

Usage Research use only

Conjugate Unconjugated
