Cat. No. PME101061

## **PRODUCT INFORMATION**

PPT **Target** 

**Synonyms** CLN1;INCL;PPT

Recombinant human PPT protein with C-terminal **Description** 

human Fc tag

**Delivery** Under development

**Uniprot ID** P20366 **Expression Host HEK293** 

Tag C-Human Fc Tag

Molecular

**Purity** 

**Background** 

PPT (Arg58-Met107) hFc(Glu99-ALA330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 30.69 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation &

lyophilization. Please see Certificate of Analysis Reconstitution for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a small glycoprotein involved in the catabolism of lipidmodified proteins during lysosomal degradation. The encoded enzyme removes thioester-linked fatty acyl groups such as palmitate from cysteine

residues. Defects in this gene are a cause of infantile neuronal ceroid lipofuscinosis 1 (CLN1, or

INCL) and neuronal ceroid lipofuscinosis 4 (CLN4). Two transcript variants encoding different isoforms have been found for this gene. [provided
