

## **PRODUCT INFORMATION**

**Target PRAME** 

**Synonyms** CT130;MAPE;OIP-4;OIP4

Recombinant human PRAME protein with C-**Description** 

terminal human Fc tag

**Delivery** Under development

**Uniprot ID** P78395 **Expression Host HEK293** 

Tag C-Human Fc Tag

Molecular

**Purity** 

PRAME (Met1-Asn509) hFc (Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 81.51 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation &

lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes an antigen that is

preferentially expressed in human melanomas and that is recognized by cytolytic T lymphocytes. It is not expressed in normal tissues, except

**Background** testis. The encoded protein acts as a repressor of retinoic acid receptor, and likely confers a growth

advantage to cancer cells via this function. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Apr 2014]

Usage Research use only

Conjugate Unconjugated
