

## **PRODUCT INFORMATION**

| Тад                             | C-Flag&Strep Tag  |
|---------------------------------|---|
| Target                          | SCN1B   |
| Synonyms                        | ATFB13, BRGDA5, DEE52, EIEE52, GEFSP1   |
| Description                     | Human SCN1B-Strep full length protein-synthetic nanodisc  |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | Q07699  |
| <b>Expression Host</b>          | HEK293  |
| <b>Protein Families</b>         | Ion Channels: Sodium  |
| Protein Pathways                | N/A   |
| Molecular Weight                | The human full length SCN1B-Strep protein has a Market M |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>- 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions. Do not use solvents with<br>a pH below 6.5 or those containing high<br>concentrations of divalent metal ions (greater<br>than 5 mM) in subsequent experiments.   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | Voltage-gated sodium channels are heteromeric<br>proteins that function in the generation and<br>propagation of action potentials in muscle and<br>neuronal cells. They are composed of one alpha<br>and two beta subunits, where the alpha subunit<br>provides channel activity and the beta-1 subunit<br>modulates the kinetics of channel inactivation.<br>This gene encodes a sodium channel beta-1<br>subunit. Mutations in this gene result in<br>generalized epilepsy with febrile seizures plus,<br>Brugada syndrome 5, and defects in cardiac<br>conduction. Multiple transcript variants encoding<br>different isoforms have been found for this<br>gene.[provided by RefSeq, Oct 2009]   |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
