

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

SCN2A **Target**

BFIC3, BFIS3, BFNIS, DEE11, EA9, EIEE11, HBA, HBSCI, HBSCII, NAC2, Na(v)1.2, Nav1.2, SCN2A1, **Synonyms**

SCN2A2

Human SCN2A-Strep full length protein-synthetic **Description**

nanodisc

Delivery 6~8weeks **Uniprot ID** Q99250

Expression Host HEK293

Protein Families Ion Channels: Sodium

Protein Pathways N/A

Storage & Shipping

The human full length SCN2A-Strep protein has a **Molecular Weight**

MW of 228 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Voltage-gated sodium channels are transmembrane glycoprotein complexes composed of a large alpha subunit with four repeat domains, each of which is composed of six membrane-spanning segments, and one or more regulatory beta subunits. Voltage-gated sodium

channels function in the generation and

Background propagation of action potentials in neurons and muscle. This gene encodes one member of the

sodium channel alpha subunit gene family. Allelic variants of this gene are associated with seizure disorders and autism spectrum disorder. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Nov 2016]

Usage Research use only Conjugate Unconjugated
