

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

SLC25A4 **Target** 

AAC1; ANT; ANT 1; ANT1; MTDPS12; MTDPS12A; **Synonyms** 

PEO2; PEO3; PEOA2; T1

Human SLC25A4-Strep full length protein-Description

synthetic nanodisc

**Delivery** 6~8weeks **Uniprot ID** P12235 HFK293 **Expression Host** 

Formulation &

Reconstitution

**Background** 

**Protein Families** Druggable Genome, Transmembrane

Calcium signaling pathway, Huntington's disease, **Protein Pathways** 

Parkinson's disease

The human full length SLC25A4-Strep protein has **Molecular Weight** 

a MW of 33.1 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The protein functions as a gated pore that translocates ADP from the cytoplasm into the mitochondrial matrix and ATP from the mitochondrial matrix into the cytoplasm. The protein forms a homodimer embedded in the inner mitochondria membrane. Mutations in this

gene have been shown to result in autosomal dominant progressive external opthalmoplegia and familial hypertrophic cardiomyopathy.
