

PRODUCT INFORMATION

Target SLC2A4 **Synonyms** GLUT4

Recombinant Human SLC2A4 with C-terminal **Description**

human Fc tag

Delivery In Stock **Uniprot ID** P14672 **Expression Host HEK293**

Tag C-Human Fc Tag

Background

SLC2A4(Asn46-Thr78) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

29.7 kDa after removal of the signal peptide. The apparent molecular mass of SLC2A4-hFc is approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

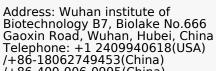

temperature.

This gene is a member of the solute carrier family 2 (facilitated glucose transporter) family and encodes a protein that functions as an insulinregulated facilitative glucose transporter. In the absence of insulin, this integral membrane protein is sequestered within the cells of muscle and adipose tissue. Within minutes of insulin

stimulation, the protein moves to the cell surface and begins to transport glucose across the cell membrane. Mutations in this gene have been associated with noninsulin-dependent diabetes mellitus (NIDDM). [provided by RefSeq, Jul 2008]

Usage Research use only

Conjugate Unconjugated
