Cat. No. FLP100479

PRODUCT INFORMATION

C-Flag Tag Tag TA2R5 **Target Synonyms T2R5**

Human TA2R5 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q9NYW4 **Expression Host HEK293**

Protein Families Transmembrane, Druggable Genome,

Protein Pathways

The human full length TA2R5 protein has a MW of **Molecular Weight**

34.5kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Formulation & Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high

concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

This gene encodes a bitter taste receptor; bitter taste receptors are members of the G proteincoupled receptor superfamily and are specifically expressed by taste receptor cells of the tongue and palate epithelia. Each of these apparently intronless taste receptor genes encodes a 7transmembrane receptor protein, functioning as a bitter taste receptor. This gene is clustered with

another 3 candidate taste receptor genes on chromosome 7 and is genetically linked to loci that influence bitter perception. [provided by

RefSeq, Jul 2008]

Usage Research use only

Conjugate Unconjugated
