

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target TLR2

Formulation & Reconstitution

Storage & Shipping

Synonyms CD282; TIL4

Human TLR2-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** 060603 **Expression Host HEK293**

Protein Families Druggable Genome, Transmembrane **Protein Pathways** Toll-like receptor signaling pathway

The human full length TLR2-Strep protein has a **Molecular Weight**

MW of 89.8 kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient témperature.

The protein is a member of the Toll-like receptor

(TLR) family which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. This protein is a cellsurface protein that can form heterodimers with other TLR family members to recognize

conserved molecules derived from

microorganisms known as pathogen-associated molecular patterns (PAMPs). Activation of TLRs by **Background**

PAMPs leads to an up-regulation of signaling pathways to modulate the host's inflammatory response. This gene is also thought to promote apoptosis in response to bacterial lipoproteins. This gene has been implicated in the

pathogenesis of several autoimmune diseases. Alternative splicing results in multiple transcript

variants.

Usage Research use only Conjugate Unconjugated
