

## **PRODUCT INFORMATION**

C-Flag Tag Tag

TPC2 **Target** 

**Synonyms** SHEP10, TPC2

Human TPC2 full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q8NHX9 **Expression Host HEK293** 

**Protein Families** Ion Channels: Other

**Protein Pathways** N/A

Storage & Shipping

**Background** 

The human full length TPC2 protein has a MW of **Molecular Weight** 

85.2kDa

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Lyophilized from nanodisc solubilization buffer (20

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

This gene encodes a putative cation-selective ion channel with two repeats of a six-transmembrane-domain. The protein localizes to

lysosomal membranes and enables nicotinic acid adenine dinucleotide phosphate (NAADP) induced calcium ion release from lysosome-

related stores. This ubiquitously expressed gene has elevated expression in liver and kidney. Two common nonsynonymous SNPs in this gene strongly associate with blond versus brown hair pigmentation.[provided by RefSeg, Dec 2009]
