

## **PRODUCT INFORMATION**

Tag C-Flag&Strep Tag

Target TRPC3

Synonyms SCA41, TRP3

**Description**Human TRPC3-Strep full length protein-synthetic

Delivery nanodisc

6~8weeks

Uniprot ID Q13507

**Protein Families** Ion Channels: Transient receptor potential

**HEK293** 

**Protein Pathways** N/A

**Expression Host** 

**Background** 

Molecular Weight

The human full length TRPC3-Strep protein has a

MW of 96 kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%
– 8% trehalose is added as protectants before
lyophilization. Please see Certificate of Analysis
for specific instructions. Do not use solvents with
a pH below 6.5 or those containing high

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquet and store

**Storage & Shipping**intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

The protein encoded by this gene is a membrane protein that can form a non-selective channel permeable to calcium and other cations. The encoded protein appears to be induced to form channels by a receptor tyrosine kinase-activated phosphatidylinositol second messenger system and also by depletion of intracellular calcium

and also by depletion of intracellular calcium stores. Two transcript variants encoding different isoforms have been found for this gene. [provided
