Cat. No. FLP100128

Delivery

Protein Pathways

Background

PRODUCT INFORMATION

C-Flag Tag Tag TRPV1 **Target**

Synonyms VR1

Human TRPV1 full length protein-synthetic **Description**

nanodisc In Stock

Uniprot ID Q8NER1 **Expression Host HEK293**

Druggable Genome, Ion Channels: Transient **Protein Families**

receptor potential, Transmembrane Neuroactive ligand-receptor interaction

The human full length TRPV1 protein has a MW of **Molecular Weight**

95.0 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Formulation & Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Capsaicin, the main pungent ingredient in hot chili peppers, elicits a sensation of burning pain by selectively activating sensory neurons that convey information about noxious stimuli to the central nervous system. The protein encoded by this gene is a receptor for capsaicin and is a non-selective cation channel that is structurally related to members of the TRP family of ion

channels. This receptor is also activated by increases in temperature in the noxious range, suggesting that it functions as a transducer of painful thermal stimuli in vivo. Four transcript variants encoding the same protein, but with different 5' UTR sequence, have been described

for this gene.

Usage Research use only Conjugate Unconjugated

ELISA assay to evaluate TRPV1-Nanodisc 0.2µg Human TRPV1-Nanodisc per well

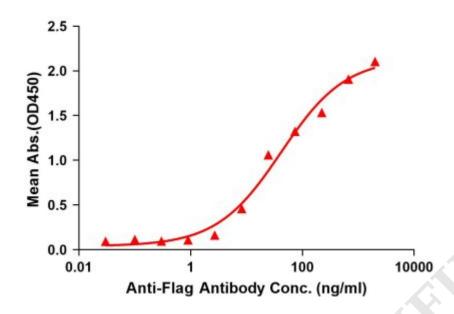

Figure 1. Elisa plates were pre-coated with Flag Tag TRPV1-Nanodisc ($0.2\mu g/per$ well). Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with TRPV1-Nanodisc is 41.79ng/ml.
