

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target TRPV1
Synonyms VR1

DescriptionHuman TRPV1-Strep full length protein-synthetic

Delivery 6~8weeks
Uniprot ID Q8NER1

Expression Host HEK293

Protein Pathways

Formulation &

Storage & Shipping

Background

Protein Families Druggable Genome, Ion Channels: Transient receptor potential, Transmembrane

Neuroactive ligand-receptor interaction

Molecular Weight

The human full length TRPV1-Strep protein has a

MW of 95 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Capsaicin, the main pungent ingredient in hot chili peppers, elicits a sensation of burning pain by selectively activating sensory neurons that convey information about noxious stimuli to the central nervous system. The protein encoded by this gene is a receptor for capsaicin and is a non-selective cation channel that is structurally related to members of the TRP family of ion

related to members of the TRP family of ion channels. This receptor is also activated by increases in temperature in the noxious range, suggesting that it functions as a transducer of painful thermal stimuli in vivo. Four transcript variants encoding the same protein, but with different 5' UTR sequence, have been described
