

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

TRPV3 **Target** 

**Synonyms** FNEPPK2, OLMS, OLMS1, VRL3

Human TRPV3-Strep full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q8NET8

**Expression Host HEK293** 

**Protein Families** Ion Channels: Transient receptor potential

**Protein Pathways** N/A

**Background** 

The human full length TRPV3-Strep protein has a **Molecular Weight** 

MW of 90.6 kDa

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation &

Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high

concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Lyophilized from nanodisc solubilization buffer (20

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

This gene product belongs to a family of nonselective cation channels that function in a variety of processes, including temperature

sensation and vasoregulation. The

thermosensitive members of this family are expressed in subsets of sensory neurons that

terminate in the skin, and are activated at distinct physiological temperatures. This channel is activated at temperatures between 22 and 40

degrees C. This gene lies in close proximity to another family member gene on chromosome 17, and the two encoded proteins are thought to associate with each other to form heteromeric channels. Multiple transcript variants encoding different isoforms have been found for this gene.

[provided by RefSeq, Apr 2012]

Usage Research use only Conjugate Unconjugated
