

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target XCR1

Expression Host

Formulation & Reconstitution

Storage & Shipping

Background

Synonyms CCXCR1; GPR5

Human XCR1-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P46094

Protein Families Druggable Genome, GPCR, Transmembrane

HEK293

Chemokine signaling pathway, Cytokine-cytokine **Protein Pathways**

receptor interaction

The human full length XCR1-Strep protein has a **Molecular Weight**

MW of 38.5 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein is a chemokine receptor belonging to the G protein-coupled receptor superfamily. The family members are characterized by the presence of 7 transmembrane domains and numerous conserved amino acids. This receptor is

most closely related to RBS11 and the MIP1-alpha/RANTES receptor. It transduces a signal by increasing the intracellular calcium ions level. The

viral macrophage inflammatory protein-II is an antagonist of this receptor and blocks signaling. Several alternatively spliced transcript variants encoding the same protein have been found for

this gene.

Usage Research use only

Conjugate Unconjugated
