This gene encodes a type I membrane protein that is a member of the immunoglobulin

superfamily. This protein is expressed by antigenpresenting cells; and it is the ligand for two proteins at the cell surface of T cells; CD28 antigen and cytotoxic T-lymphocyte-associated

protein 4. Binding of this protein with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of this protein with cytotoxic T-lymphocyte-associated protein 4 negatively **Background**

regulates T-cell activation and diminishes the immune response. Alternative splicing results in several transcript variants encoding different
