

PRODUCT INFORMATION

Clone ID	DMC421
Target	FLT3LG
Synonyms	FLT3LG; FL; FLT3L; Flt3 ligand
Host Species	Rabbit
Description	PE-conjugated Anti-FLT3LG antibody(DMC421); IgG1 Chimeric mAb
Delivery	3-4 weeks
Uniprot ID	P49771
IgG type	Rabbit/Human Fc chimeric IgG1
Clonality	Monoclonal
Reactivity	Human
Applications	Flow Cyt
Recommended Dilutions	Flow Cyt 1:100
Purification	Purified from cell culture supernatant by affinity chromatography
Formulation & Reconstitution	Liquid □ PBS with 0.05% Proclin300, 1% BSA
Storage & Shipping	Store at 2°C-8°C for 6 months
Background	<p>FMS-like tyrosine kinase 3 ligand (Flt-3 Ligand) is also known as FL; Flt3L and FLT3LG; is an α-helical cytokine that promotes the differentiation of multiple hematopoietic cell lineages. FLT3LG is expressed as a noncovalently linked dimer by T cells and bone marrow and thymic fibroblasts. Each 36 kDa chain carries approximately 12 kDa of N- and O- linked carbohydrates. FLT3LG is structurally homologous to stem cell factor (SCF) and colony stimulating factor 1 (CSF-1). FLT3LG acts as a growth factor that increases the number of immune cells by activating the hematopoietic progenitors. It also induces the mobilization of the hematopoietic progenitors and stem cells in vivo which may help the system to kill cancer cells. FLT3LG induces the expansion of monocytes and immature dendritic cells as well as early B cell lineage differentiation. FLT3LG cooperates with IL2; IL6; IL7; and IL15 to induce NK cell development and with IL3; IL7 and IL11 to induce terminal B cell maturation. Animal studies also show FLT3LG to reduce the severity of experimentally induced allergic inflammation. FLT3LG is crucial for steady-state pDC and cDC development. A lack of FLT3L results in low levels of DCs.</p>
Usage	Research use only
Conjugate	PE-conjugated
