

PRODUCT INFORMATION

Clone ID DMC421 **Target** FLT3LG

Synonyms FLT3LG; FL; FLT3L; Flt3 ligand

Host Species

PE-conjugated Anti-FLT3LG antibody(DMC421); Description

IgG1 Chimeric mAb

Delivery Under Development

Uniprot ID P49771

Rabbit/Human Fc chimeric IgG1 IgG type

Clonality Monoclonal Reactivity Human **Applications** Flow Cyt

Recommended

Flow Cyt 1:100 **Dilutions**

Purified from cell culture supernatant by affinity **Purification**

chromatography

Formulation & Reconstitution

Background

Liquid PBS with 0.05% Proclin300, 1% BSA

Storage & Shipping Store at 2°C-8°C for 6 months

> FMS-like tyrosine kinase 3 ligand (Flt-3 Ligand) is also known as FL; Flt3L and FLT3LG; is an ahelical cytokine that promotes the differentiation of multiple hematopoietic cell lineages. FLT3LG is expressed as a noncovalentlylinked dimer by T cells and bone marrow and thymic fibroblasts Each 36 kDa chain carries approximately 12 kDa of N- and O- linked carbohydrates. FLT3LG is structurally homologous to stem cell factor (SCF) and colony stimulating facor 1 (CSF-1). FLT3LG acts as a growth factor that increases the number of immune cells by activating the hematopoietic progenitors. It also induces the mobilization of the

hematopoietic progenitors and stem cells in vivo which may help the system to kill cancer cells. FLT3LG induces the expansion of monocytes and immature dendritic cells as well as early B cell lineage differentiation. FLT3LG cooperates with IL2; IL6; IL7; and IL15 to induce NK cell

development and with IL3; IL7 and IL11 to induce terminal B cell maturation. Animal studies also

show FLT3LG to reduce the severity of experimentally induced allergic inflammation.

FLT3LG is crucial for steady-state pDC and cDC development. A lack of FLT3L results in low levels

of DCs.

Usage Research use only Conjugate PE-conjugated
