

## **PRODUCT INFORMATION**

**Clone ID** 8C4 MET **Target** 

**Synonyms** DA11;HGFR;AUTS9;RCCP2;c-Met;DFNB97

**Host Species** 

PE-conjugated Anti-MET antibody(8C4), IgG1 Description

Chimeric mAb

**Delivery Under Development** 

**Uniprot ID** P08581

**IgG** type Rabbit/Human Fc chimeric IgG1

Clonality Monoclonal Reactivity Human **Applications** Flow Cyt

Recommended

Flow Cyt 1:100 **Dilutions** 

Purified from cell culture supernatant by affinity **Purification** 

chromatography

Formulation & Reconstitution

Liquid PBS with 0.05% Proclin300, 1% BSA

Storage & Shipping Store at 2°C-8°C for 6 months

> This gene encodes a member of the receptor tyrosine kinase family of proteins and the product of the proto-oncogene MET. The encoded preproprotein is proteolytically processed to generate alpha and beta subunits that are linked via disulfide bonds to form the mature receptor. Further processing of the beta subunit results in the formation of the M10 peptide, which has been shown to reduce lung fibrosis. Binding of its ligand, hepatocyte growth factor, induces

**Background** 

dimerization and activation of the receptor, which plays a role in cellular survival, embryogenesis, and cellular migration and invasion. Mutations in this gene are associated with papillary renal cell carcinoma, hepatocellular carcinoma, and various

head and neck cancers. Amplification and overexpression of this gene are also associated with multiple human cancers. [provided by
