> Putative adhesion molecule that mediates sialicacid dependent binding to cells. Preferentially binds to alpha-2,3- and alpha-2,6-linked sialic acid. Also binds disialogangliosides

(disialogalactosyl globoside; disialyl lactotetraosylceramide and disialyl GalNAc lactotetraoslylceramide). The sialic acid recognition site may be masked by cis interactions with sialic acids on the same cell surface. In the immune response; may act as an inhibitory receptor upon ligand induced tyrosine

phosphorylation by recruiting cytoplasmic phosphatase(s) via their SH2 domain(s) that block

signal transduction through dephosphorylation of signaling molecules. Mediates inhibition of natural killer cells cytotoxicity. May play a role in hemopoiesis. Inhibits differentiation of CD34 cell

precursors towards myelomonocytic cell lineage and proliferation of leukemic myeloid cells (in

vitro).[UniProtKB:Swiss-Prot Function]

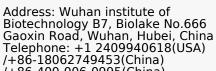

Usage Research use only Conjugate PE-conjugated
